

Statement of Purpose - Amazon ML Summer School 2026

As a B.Tech student specializing in Artificial Intelligence and Machine Learning, I am fascinated by how machine learning transforms large volumes of data into meaningful decisions. My interest in AI grew from a simple question: how can machines understand and process human-generated information in a useful way? This curiosity motivated me to pursue AIML and explore practical applications beyond classroom learning.

To deepen my understanding, I worked on an AI-based Text Summarizer using NLP, Transformers, PyTorch, and the PEGASUS model. Through this project, I learned how modern language models process information and generate concise summaries from lengthy documents. Building this system exposed me to challenges such as text preprocessing, model selection, and evaluating generated outputs. It strengthened my interest in machine learning and showed me the impact AI can create in solving real-world problems.

I also developed MediInfoQR, an Android application that securely manages medical records using QR codes, Firebase, and Cloudinary. While this project was not purely ML-focused, it taught me the importance of building reliable, user-centered solutions and strengthened my software development skills.

Beyond academics, participation in Smart India Hackathon, serving as Coordinator of the Mathelets Club, and leading my college volleyball team have helped me develop teamwork, leadership, and problem-solving abilities. These experiences taught me how to collaborate effectively and remain focused under pressure.

I am applying to Amazon ML Summer School because it offers an opportunity to learn machine learning concepts from industry experts and understand how ML is applied at scale. I believe the program will help bridge the gap between academic knowledge and real-world machine learning systems. The mentorship, structured learning, and exposure to advanced ML topics will help me build a stronger foundation for future research and development.

My long-term goal is to become a Machine Learning Engineer who develops intelligent solutions that create meaningful impact. Amazon ML Summer School would be a significant step toward that goal by providing the knowledge, guidance, and exposure needed to grow as an AI practitioner.

Thank you for considering my application.

Pilla Kavya
